

Streamline check-in and automate APIS data capture

In today's world where traveler safety is paramount, adhering with security APIS requirements often lead to lengthy check-in queues. The challenge for the airline industry is to balance the security requirements of passenger data collection while providing travelers an easy and fast customer experience.

Mobile enabled APIS data capture

Jumio can help you save passenger check-in time by turning their mobile device or web camera into an ID scanning tool. Our Netverify® technology intelligently sees, extracts and validates government issued IDs from over 120 countries, and enables you to meet APIS customer data requirements without your customer ever having to visit a check-in desk or kiosk.

How it works...

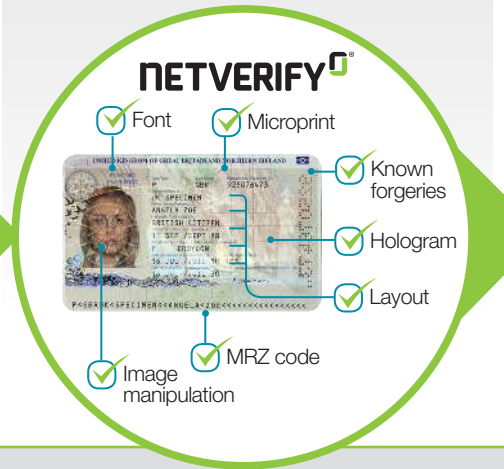

1 When your customer is in your app they are offered the option to scan their passport or ID using their device camera.

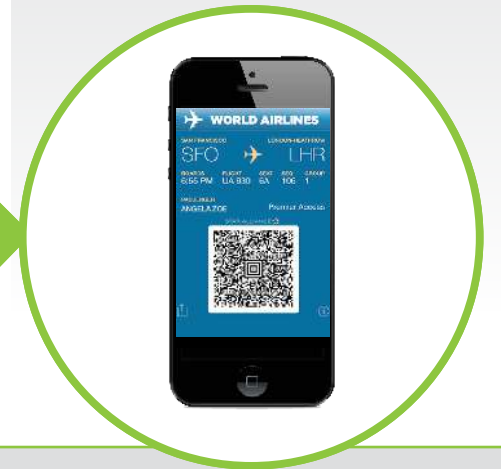

2 In less than a second Jumio's Netverify extracts relevant customer data such as name, date of birth, gender, nationality and passport number and passes the data to your systems.

3 Jumio authenticates the document by determining that it is a bonafide, un-manipulated and legitimate government-issued ID.

4 Once APIS data has been captured, carriers can issue a boarding pass to the passenger's mobile device so that they don't need to queue at check-in.

The result?

 APIS data capture facilitation

 Fast and intuitive mobile experience

 Save passengers time at the airport

Mobile check-in and APIS data capture

United Airlines: Global airline carrier

Objective: Meet APIS requirements and streamline mobile check-in

1

Traveler accesses United Airlines mobile app, enters record locator, and chooses "Add Passport"

2

Traveler holds up Passport within the frame (no photo taken or stored)

3

Data is extracted almost instantaneously

4

Passport is authenticated

5

Traveler confirms itinerary and stores in Passbook or email

“Putting your passport information in can take a significant amount of time and it's something that creates frustration. We've developed the new function in partnership with credentials management company Jumio to ensure details can be scanned in easily, safely and securely.”

easyJet

“Airlines are now developing their apps with a view to driving loyalty, ancillary revenues and a better customer experience and Jumio is one of those technologies that as soon as a consumer tries it once they'll want their airlines's app to have it as it makes life so much easier.”
