

Verify Customer IDs in Real Time

Physical ID Verification

Jumio's AI-powered ID Verification allows businesses to establish the genuine identity of their users by verifying government-issued IDs in real time, automatically. Jumio's advanced technologies detect manipulations of ID images, content (name, address, date of birth, etc.) and face photo replacements.

1. Acquisition

The user captures an image of their physical ID using Jumio's user-friendly technology.

2. Extraction

Jumio extracts data from the ID document image.

3. Verification

Traditional IDs are verified using computer vision and AI to ensure the ID is valid and not manipulated.

Electronic ID (eID) Verification

In addition to physical documents, Jumio supports leading forms of digital identity, including eIDAS-compliant eIDs across Europe and Brazil's CNH Digital.

- ✓ eID attributes are retrieved directly from trusted issuing infrastructures.
- ✓ Digital signatures and certificates are validated against root authorities to confirm authenticity.
- ✓ This ensures a faster, government-backed verification experience that strengthens trust while reducing friction.
- ✓ Fully accredited under eIDAS, reducing the compliance burden by eliminating the need to secure your own accreditation.

Key Benefits

Simplify Compliance

Jumio ID Verification safeguards customer data while ensuring KYC/AML compliance.

Reduce Fraud Exposure

Jumio uses advanced automation and AI to quickly determine if an ID is authentic or if it has been doctored.

Convert Good Customers

Jumio delivers actionable reason codes indicating why an ID was rejected, so your customers can course correct.

Solution Highlights

- ✓ Catch fake IDs and prevent fraud while simplifying the experience for your good users
- ✓ Omnichannel verification
- ✓ Meet KYC/AML requirements and country-specific regulations
- ✓ Incorporate into your existing processes via desktop, mobile, and/or API
- ✓ Eliminate manual ID verification processes
- ✓ Accelerate customer onboarding and transactions
- ✓ Simplify the user experience without compromising security
- ✓ Enhance conversions with support for user-preferred ID types

More to Appreciate

- Supports more than 5,000 government-issued ID types across 200 countries and territories
- Supports non-Latin character documents
- Fast and simple user experience
- Fully customizable to align with your corporate UI/UX
- Offering 1+1 and 2+2 data checks

Use Cases

- KYC/AML and eIDAS compliance
- KBA replacement
- Password remediation
- Business process automation
- Online customer onboarding
- Fraud prevention
- Age verification
- Fake/fraudulent ID detection
