Document Verification

NETVERIFY[®]

Capture and Verify Customer Documents with Ease

Identity theft is a growing problem for consumers, businesses, and governments. Netverify[®] Document Verification allows your customers to verify their details over the internet, rather than in-store, in-branch, or in-person.

Netverify enables your customers to quickly scan documents such as utility bills, credit card statements, bank statements, and social security cards using their smartphones, even if the documents are crumpled or creased.

Acquisition

After your customer captures an image of a document, Netverify scans and extracts key identity-related information.

Extraction

Extracts a wide range of data from various Latin-based character documents and masks credit card numbers and other PII data as required.

Verification

Confirms document authenticity through advanced security checks performed by Jumio's document experts.

Product Highlights

- ✓ **Simplify the user experience:** Easily scan documents using a smartphone camera.
- ✓ **Count on accurate results:** Computer vision technology and document experts combine to deliver 100% extraction accuracy, even when documents are crumpled.
- ✓ **Get results quickly:** Data extraction and verification occurs in seconds.
- ✓ **Enhance customer identity verification:** Easily extract and compare names and addresses from secondary documents such as utility bills, bank statements, credit card statements, and social security cards.
- ✓ **Reduce operational costs:** Cut costs associated with manual data extraction.

JUMIO[®]

More to Appreciate
