

ID Verification

NETVERIFY[®]

Verify Customer IDs in Real Time

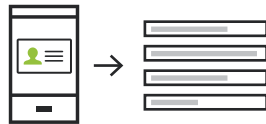

Identity fraud is an issue many organizations must combat. The challenge of today's organizations is to create a seamless ID verification process while reducing transaction friction and deterring fraud.

Jumio's Netverify[®] ID Verification allows businesses to establish the genuine identity of their users by verifying government-issued IDs in real-time. ID Verification is used by financial service organizations and leading brands to create trust for safe onboarding, money transfers, and user authentication.

Acquisition

Captures front and back of ID documents using cutting-edge technologies to get best possible image quality.

Extraction

Data is automatically extracted from ID documents to definitively assess their authenticity.

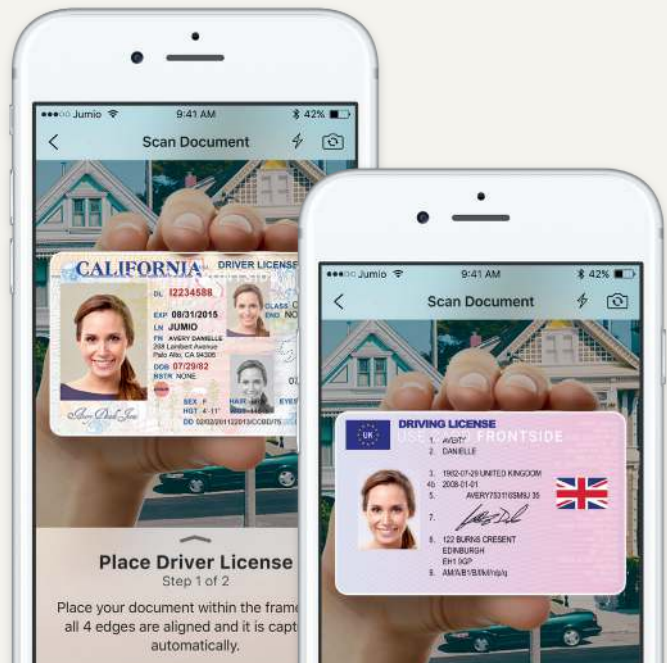

Verification

Computer vision, machine learning, AI, and verification experts are used together to verify the ID in real time.

Product Highlights

- ✓ Catch fake IDs and prevent fraud.
- ✓ Omnichannel verification.
- ✓ 100% data extraction accuracy.
- ✓ Meet KYC/AML requirements.
- ✓ Incorporate into your existing processes via desktop, mobile, and/or API.
- ✓ Eliminate manual ID verification processes.
- ✓ Accelerate customer onboarding and transactions.
- ✓ Simplify the user experience without compromising security.
- ✓ Supporting over a dozen types of IDs.

The Case for ID Verification

Seamless Customer Experience

Automated solutions have a hard time capturing low quality ID images. As a result, good customers are turned away when their ID photos are blurry or poorly-lit.

Netverify is easy to use and backed by ID experts who can step in and validate an ID in real time to preserve the customer experience.

Reduce Fraud Exposure

Advanced solutions often don't have the intelligence to find and decode enhanced security features embedded within government-issued IDs.

Netverify uses the latest technology backed by ID experts to quickly determine if an ID is authentic or if it has been doctored.

Convert Good Customers

Too many solutions will incorrectly flag an ID as invalid without providing a rationale.

Netverify delivers actionable reason codes indicating why an ID was rejected so your customers can course correct.

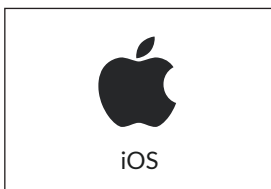

More to Appreciate

- ✓ Largest worldwide support of government-issued IDs, supporting more than 200 countries.
- ✓ Channel agnostic (desktop, mobile, API).
- ✓ Supports non-Latin character documents.
- ✓ Fast and simple user experience.
- ✓ Fully customizable to align with your corporate UI/UX.

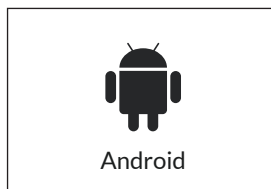

Use Cases

- ✓ KYC/AML
- ✓ KBA replacement
- ✓ Password remediation
- ✓ Business process automation
- ✓ Online customer onboarding
- ✓ Fraud prevention
- ✓ Age verification
- ✓ Fake/fraudulent ID detection
