Automate and Simplify Identity Verification

In the era of large-scale data breaches, identity theft and account takeover, businesses need a reliable way to determine if someone is who they claim to be online. Jumio Identity Verification uses AI, machine learning and biometrics to automate the verification process and help companies improve conversion rates, comply with AML and KYC regulations and better detect fraud — all while delivering a definitive yes/no decision in seconds.

Product Highlights

- Intimidate fraudsters and detect fraudulent transactions before they are processed.
- Deliver a state-of-the-art user experience highlighted by the use of selfies to prove customer presence.
- Transform ‘customer not present’ transactions into ‘ID present’ transactions.
- Gain anti-spoofing detection via certified liveness detection.
- Verify identity in real time using AI, machine learning and biometrics.

Mobile phone account takeovers
are on the rise.

The Jumio Difference

Face Match
- Not cropped from ID
- Not a photo of the ID
- Not taken from a screen, video or paper copy
- No filter applied
- Age difference within acceptable range
- Face is present and fully visible

Liveness Check

Similarity Check
ID photo matches the user’s selfie.

Validity Check
The selfie is real.

Certified Liveness Check
Perform liveness and anti-spoofing detection using advanced face-based biometric technology.

More to Appreciate
- Largest worldwide support of government-issued IDs.
- Channel agnostic (desktop, mobile, API).
- Includes ID verification.
- Supports non-Latin character documents.
- Fast, simplified, more secure user experience.
- Accelerate customer onboarding.
- Fully customizable to align with your corporate UI/UX.
