

Real-Time Identity Verification, Powered Exclusively by AI

Jumio Go is our fastest-ever, fully automated identity verification solution. Powered by AI, Jumio Go enables modern enterprises with a reliable way to verify remote users, ensuring that someone is who they claim to be online. Increase conversions, reduce abandonment rates and deliver real-time identity verification with Jumio Go.

**Fully automated
onboarding**

**Stop fraudsters
in their tracks**

**Comply with
AML & KYC regulations**

How It Works

Jumio Go combines AI, OCR and certified liveness detection technologies to automatically extract ID document data and validate the user digital identity in seconds. As part of this identity proofing process, Jumio Go compares the picture extracted from the ID document with a selfie of its presenter through biometric face comparison.

ID Proofing Check
Automatically extracts ID data from front/back of document and performs security and data checks.

Similarity Check
Is the person holding the ID document the same person shown in the ID photo?

Certified Liveness Check
Is the person holding the ID physically present during the transaction?

Definitive Answer
Jumio Go instantly delivers a definitive yes or no answer and even provides real-time course-correction codes to improve conversions.

Product Highlights

Unrivalled Speed

Employs AI, OCR and biometrics to deliver our fastest identity verification solution ever.

Data Driven AI

Exploits the power of massive production data sets and machine learning to spot patterns and better detect when an ID has been manipulated or altered in any way.

Certified Liveness Detection

Detects and deters advanced spoofing attacks including deepfakes with advanced liveness detection that has achieved Level-2 certification for ISO 30107-3 iBeta Presentation Attack Detection (PAD) testing.

Global Coverage

Supports more than 1,500 ID types across the globe, helping enterprises scale to serve an increasingly international customer base.

Omnichannel Support

Supports a wide range of customer implementations, including mobile SDK (iOS & Android), mobile web and cloud API service options.
