Fight Fraud and Protect Your Agency with Streamlined Identity Proofing Solutions

In today’s digital world, governments are under greater pressure than ever to provide a secure yet efficient online experience for their constituents. As a result, agencies across the public sector are tasked with accurately verifying users online to ensure that they are who they claim to be — without sacrificing the user experience.

Jumio’s identity proofing platform helps improve the quality and efficiency of public services while ensuring that sensitive information and funds are kept away from fraudsters.

Jumio’s end-to-end identity verification and authentication solutions leverage AI, machine learning, face-based biometrics, liveness detection and other advanced technologies to establish the real-world identity of your users, all within a remarkably simple interface.

Identity Proofing through Industry-Leading Technologies

Jumio’s end-to-end identity verification and authentication solutions leverage AI, machine learning, face-based biometrics, liveness detection and other advanced technologies to establish the real-world identity of your users, all within a remarkably simple interface.

Step 1: ID Proofing Check
Is the ID document authentic and valid?

Step 2: Similarity Check
Is the person holding the ID the same person shown in the ID photo?

Step 3: Liveness Check
Is the person holding the ID physically present during the transaction?

Step 4: Definitive Answer
Jumio delivers a definitive yes or no answer in seconds.
How Jumio Can Help

Jumio’s suite of identity and authentication solutions are a perfect fit for the public sector. As the industry leader with over a decade of experience processing hundreds of millions of scans, Jumio has the proven experience and ability to scale that is essential for serving the public.

**Fraud Prevention**

Jumio Identity Verification requires a valid government-issued ID and a selfie, serving as a powerful fraud-prevention tool as fraudsters generally prefer not to use their own likeness when defrauding a government institution.

**Liveness Detection**

Given the rise of spoofing (the act of using a photo, video or a different substitute for an authorized person’s face), Jumio employs state-of-the-art liveness detection to ensure that the person creating an account is physically present.

**Ongoing Authentication**

When a user logs in or attempts to interact with your agency, they take a fresh selfie and a new biometric template is created, which is then compared to the original template (created during account setup) to ensure that the person logging in is the same as the account owner.

**Partner to the Public Sector**

Jumio understands the needs of government agencies. We have authorization to operate (ATO), are Section 508 compliant and have multiple security certifications.

**Key Benefits**

- **Highly Secure**
  
  Security is a top priority for Jumio, and solutions in our platform have achieved various certifications, including ISO/IEC 27001:2013, PCI DSS and SOC2 Type 2. Our primary liveness detection technology has passed Levels 1 and 2 testing by NIST/NVLAP Accredited Lab iBeta for ISO Presentation Attack Detection.

- **Compliance Mandates**
  
  Meet regulatory guidelines and best practices by ensuring that your users are who they say they are.

- **Multi-factor Solutions**
  
  Face-based verification and liveness detection provide a strong deterrent for would-be fraudsters.

- **Reputation Management**
  
  Show constituents that you take the protection of their personal data and benefits seriously.

- **Cross-platform Support**
  
  Jumio seamlessly integrates into websites and iOS or Android applications via APIs, SDKs and webcams.

- **AI-driven Innovation**
  
  Jumio uses artificial intelligence and machine learning to reliably extract key data from government-issued IDs and find anomalies in manipulated IDs.
