

Deter fraud and provide a seamless user experience for customers on the go.

Businesses involving non-ownership usage of cars, scooters and other vehicles need to verify the identities of customers, before handing over the keys or picking up a new rider. While you want to protect your fleet, you also want to provide a digital user experience that makes sign-up and ongoing usage quick and easy.

How Jumio Can Help

Jumio’s suite of identity and authentication solutions is specifically designed for mobility organizations.

ID Verification

Establish the genuine identity of your users before letting them take the wheel. Jumio ID Verification automatically verifies government-issued IDs in real time, employing advanced technologies to detect digital manipulations.

Fraud Deterrence

Jumio helps mobility-based businesses protect their fleets by ensuring that the person creating an account or leasing a vehicle is who they claim to be.

Liveness Detection

Jumio uses advanced facial biometrics to ensure the selfie is taken of a live person, not a photo, video or deepfake.

Ongoing Authentication

Through the simple act of taking a selfie, Jumio Authentication ensures future logins and transactions are being made by the original account owner.

Identity Verification through AI and Automation

Jumio's automated identity verification and authentication solutions leverage AI, computer vision and machine learning to establish the real-world identity of your users.

ID Check

Is the ID document authentic and valid?

Selfie + Liveness Checks

Is the person holding the ID the same person shown in the ID photo? Is the person physically present during the transaction?

Authentication

Is the person who originally signed up for the account the same person attempting to access the account?

Key Benefits

- ✓ **Fast, accurate conversions**
Achieve seamless customer conversions with automated and accurate verification that occurs in real time.
- ✓ **The UX experts**
We'll share the magic and best practices for how to provide an intuitive and satisfying user experience.
- ✓ **Cross-platform support**
Jumio seamlessly integrates into websites, iOS or Android applications via APIs, SDKs and webcams.
- ✓ **AI-driven innovation**
Jumio uses AI and machine learning to reliably extract key data from government-issued IDs and find anomalies in manipulated IDs.
- ✓ **Online and onsite verification**
Intuitive digital and kiosk-driven experiences help you verify the identity of all customers, whether they're online or onsite.
- ✓ **Biometric-based solutions**
Face-based biometric verification and liveness detection are a strong deterrent for would-be fraudsters using a fake ID.
- ✓ **Global footprint**
Jumio supports more countries, languages and document types than any other solution.
- ✓ **Fast implementation**
Quickly integrates into your website or mobile app and business processes.
