

Remote Onboarding and eKYC Simplified

Together, Jumio and Amazon Web Services (AWS) provide a frictionless and secure online identity verification solution that enables organizations to verify new and existing users with the ease of taking a selfie.

Jumio leverages a broad range of AWS services, including Amazon SageMaker and Amazon Rekognition, to power its platform and solutions. This enables Jumio to better meet the needs of AWS customers today and tomorrow.

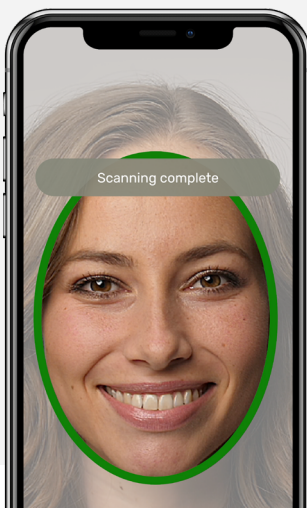

How it Works

Enterprises can incorporate Jumio's solutions right into their existing apps and workflows to streamline the capture of identity documentation and perform identity verification. Organizations can quickly build workflows to capture pictures of government-issued IDs and corroborating selfies to more definitively establish the digital identities of their end users.

1. ID Check

Is the identity document (ID) authentic and valid?

2. Selfie + Liveness Check

Is the person holding the ID the same person shown in the ID photo?
Are they physically present during the transaction?

3. Risk-based Decision

Jumio calculates the fraud risk and approves or rejects the identity transaction in seconds based on your predefined risk tolerances.

The Jumio + AWS Advantage

Market Leader

Jumio was recently recognized as a Leader in the first-ever 2024 Gartner® Magic Quadrant™ for Identity Verification based on specific criteria that analyzed the company's overall Completeness of Vision and Ability to Execute.

Bank-Grade Security

Jumio solutions have achieved various certifications, including ISO/IEC 27001:2013, PCI DSS and SOC2 Type 2. Jumio Liveness complies with ISO 30107-3, the highest biometric presentation attack detection standard.

Compliance

Simplify due diligence and comply with increasing mandates, including Anti-Money Laundering (AML), Know Your Customer (KYC), General Data Protection Regulation (GDPR) and Payment Services (PSD2) directives. Also, enable access to 1+1 and 2+2 data checks.

AWS Benefits

- ✓ **Helps Retire Your AWS EDP Quota:** AWS customers with a signed Enterprise Discount Program (or Private Pricing Addendum) can purchase Jumio Identity Verification and apply and utilize EDP credits toward your committed spend.
- ✓ **AWS Marketplace:** AWS customers can benefit from consolidated billing, fast procurement and flexible pricing and terms when purchasing Jumio's solutions. Our solutions can be procured through private offers for your AWS account which enable you to receive product pricing and EULA terms from Jumio that aren't publicly available.
- ✓ **Enhanced Security:** Products on AWS Marketplace go through a rigorous vetting process by AWS to ensure they meet stringent security standards.

Jumio Benefits

- ✓ **Faster Onboarding:** Jumio leverages AI and a proprietary mix of AWS and biometric technologies to rapidly verify customers (KYC), assess fraud risk and reduce onboarding time from hours to a few minutes.
- ✓ **Better Fraud Detection:** Jumio Liveness is an effective deterrent against new account fraud, spoofing attacks (including deepfakes) and account takeovers.
- ✓ **100% SaaS:** Jumio is a 100% SaaS solution. Instead of building your own, Jumio offers a fully configured AI-based best-of-breed solution.
- ✓ **Global Coverage:** Jumio has processed over 1 billion transactions and supports over 5,000 ID types across 200 countries and territories – including user-preferred ID types, such as digital IDs.

Amazon Web Services (AWS) is the world's most comprehensive and broadly adopted cloud platform, offering over 200 fully featured services from data centers globally. Millions of customers – including the fastest-growing startups, largest enterprises, and leading government agencies – use AWS to lower costs, become more agile, and innovate faster.

Jumio helps organizations to know and trust their customers online. From account opening to ongoing monitoring, the Jumio Platform provides advanced identity verification, risk signals and compliance solutions that help you accurately establish, maintain and reassert trust.
