Accelerate Digital Trust in Travel

Fraudsters can make a lot of money from stealing travelers' government-issued IDs, credit cards and loyalty points. At the same time, travelers are increasingly demanding digital check-in and the ability to go straight to their hotel room or rental car without having to stop at the front desk to check in. Companies are left juggling the need to provide a great user experience with a highly effective Know Your Customer (KYC) solution that prevents fraud by remote users as well as in-person travelers.

Solutions Across the Travel Industry

Jumio's identity verification and authentication solutions streamline digital trust for travel companies around the globe.

Travel Booking

Create fast and effortless checkout experiences, minimizing the likelihood shoppers will abandon their mobile transactions before completion.

Hotel Check-in

Credit card and ID scanning eliminates laborious manual data entry on small mobile devices, reducing abandonment and increasing hotel bookings and customer satisfaction.

Domestic Terminal Check-in

Travelers can scan their credit card to speed up payment when buying a flight ticket and then scan their passport or REAL ID-compliant license to check in for domestic flights.

International Terminal Check-in

Use digital travel ID verification to help balance the security checkpoint requirements of data collection by providing passengers a quick and streamlined way to obtain boarding passes for international travel.

Loyalty Accounts

Airline, hotel and rental car points are a hot commodity on the dark web. Use biometric authentication to keep fraudsters from taking over your customers' loyalty accounts.

Ride Sharing

Verify the digital identities of drivers and passengers to increase the level of trust between strangers, which is the lifeblood of the sharing economy.

Vacation Rental

Real-time ID verification enhances the trust and safety efforts of the world's leading community-driven hospitality companies.

Key Benefits

Reputation management

Show travelers that you take the protection of their personal data and loyalty accounts seriously.

Online and onsite verification

Intuitive digital and kiosk-driven experiences help you verify the identity of all travelers, online or onsite.

Biometric-based solutions

Face-based biometric verification and liveness detection provide a strong deterrent for would be fraudsters.

Cross-platform support

Jumio seamlessly integrates into websites and iOS or Android applications via APIs, SDKs or a web client.

Compliance mandates

Meet regulatory guidelines and best practices by ensuring that your customers are who they say they are.

AI-driven innovation

Jumio uses artificial intelligence and machine learning to reliably extract key data from government-issued IDs and find anomalies in manipulated IDs.
