

## Instantly Extract and Populate User Data from IDs to Streamline Onboarding

Fastfill accelerates onboarding by instantly extracting ID data and returning it to the customer for seamless, low-friction experiences. Using OCR, barcode and MRZ scanning, it populates forms automatically, reducing friction, manual errors and drop-off rates while ensuring compliance with evolving ID regulations.

### Faster onboarding

Extracts and auto-fills user details instantly for frictionless account creation

### Compliance-ready

Aligns with new ID verification mandates

### Improved accuracy

Direct data capture from verified IDs reduces manual input errors

## How It Works

### STEP 1 Capture

The user scans or uploads an ID document

FN Mark  
LN Jones

### STEP 3 Deliver

The extracted data is returned to the customer

### STEP 4 Integrate

Customers use the returned data to pre-fill forms or streamline onboarding flows

## Key Use Cases

### Gaming

Comply with new ID-at-onboarding mandates while maintaining a fast, user-friendly signup flow.

### Financial Services

Pre-fill KYC forms to accelerate account opening.

### Telecom

Simplify SIM registration with instant ID.

### Travel & Hospitality

Speed up guest check-in by extracting passport data.

### E-commerce / BNPL

Streamline checkout and age verification processes.
